Chemical kinetics, also known as reaction kinetics, is the study of rates of chemical processes. Chemical kinetics includes investigations of how different experimental conditions can influence the speed of a chemical reaction and yield information about the reaction's mechanism and transition states, as well as the construction of mathematical models that can describe the characteristics of a ...

In chemical kinetics a reaction rate constant or reaction rate coefficient, k , quantifies the rate of a chemical reaction.. For a reaction between reactants A and B to form product C $a A + b B \rightarrow c C$. the reaction rate is often found to have the form: $r = k [A]^m [B]^n$ Here $k(T)$ is the reaction rate constant that depends on temperature. $[A]$ and $[B]$ are the molar concentrations of substances A and B in ...
