Lysozyme, also known as muramidase or N-acetylmuramide glycanhydrolase is an antimicrobial enzyme produced by animals that forms part of the innate immune system. Lysozyme is a glycoside hydrolase that catalyzes the hydrolysis of 1,4-beta-linkages between N-acetylmuramic acid and N-acetyl-D-glucosamine residues in peptidoglycan, which is the major component of gram-positive bacterial cell wall.

Lysozyme - Wikipedia

The mechanism of alkaline hydrolysis of amides: a comparative computational and experimental study of the hydrolysis of N -methylacetamide, N -methylbenzamide, and acetanilide

The mechanism of alkaline hydrolysis of amides: a

Comprehensive allergenicity assessment was done with only a few soy products, as for example soybean oil and lecithin. By means of immunoblotting and EAST inhibition experiments, the level of protein found in soy oil was low in comparison to that in soy lecithin.

Food processing and allergenicity - ScienceDirect

Lignocellulosic biomass can be utilized to produce ethanol, a promising alternative energy source for the limited crude oil. There are mainly two processes involved in the conversion: hydrolysis of cellulose in the lignocellulosic biomass to produce reducing sugars, and fermentation of the sugars to ethanol.

Hydrolysis of lignocellulosic materials for ethanol

Simultaneous saccharification and co-fermentation of paper sludge to ethanol by *Saccharomyces cerevisiae* RWB222. Part II: Investigation of discrepancies between predicted and observed performance at high solids concentration

Simultaneous saccharification and co-fermentation of paper

ABSTRACT. Maltodextrin was produced from cassava and corn starch by enzymatic hydrolysis with α -amylase. The cassava starch hydrolysis rate was higher than that of corn starches in maltodextrin production with shorter dextrose equivalent (DE).

Cassava and corn starch in maltodextrin production - SciELO

Advantages of α -amylase • Heat-resistant and functional Polyimide film derived from BPDA High heat resistance • can be used in high-temperature processes just below 500°C. This exceeds industry standard operating temperatures around 300°C.

UBE Polyimide Film Exhibits Industry Leading Heat Resistance

The sludge that comes out of waste water treatment has a water content of between 97 % and 99.5 %. In sludge thickening, the dry solids (DS) content of sludge is increased by reducing the water content with low energy input.
