Java Database Connectivity (JDBC) is an application programming interface (API) for the programming language Java, which defines how a client may access a database. It is a Java-based data access technology used for Java database connectivity. It is part of the Java Standard Edition platform, from Oracle Corporation. It provides methods to query and update data in a database, and is oriented ...

Summary: this tutorial shows you how to write and read MySQL BLOB data using JDBC API.. We will use the candidates table in the mysqljdbc sample database. For the sake of demonstration, we will add one more column named resume into the candidates table. The data type of this column will be MEDIUMBLOB that can hold up to 16MB. The following ALTER TABLE statement adds resume column to the ...

An embedded database system is a database management system (DBMS) which is tightly integrated with an application software that requires access to stored data, such that the database system is "hidden" from the application's end-user and requires little or no ongoing maintenance. It is actually a broad technology category that includes database systems with differing application programming ...
