

### **dna and rna lab pdf**

Lab # 12: DNA and RNA As a cell divides, the DNA double helix splits into a single helix (Figure 12.3). Each single helix then serves as a template for a new strand. Neighboring nucleotides then bind to the single strand helix after which a new sugar-phosphate backbone is formed.

1 CHAPTER6 The Structures of DNA and RNA The discovery that DNA is the prime genetic molecule, carrying all the hereditary information within chromosomes, immediately focused attention on its structure.

### **CHAPTER 6 The Structures of DNA and RNA - Biology**

DNA stands for deoxyribonucleic acid, while RNA is ribonucleic acid. Although DNA and RNA both carry genetic information, there are quite a few differences between them. This is a comparison of the differences between DNA versus RNA, including a quick summary and a detailed table of the differences.
