Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

A spectrochemical series is a list of ligands ordered on ligand strength and a list of metal ions based on oxidation number, group and its identity. In crystal field theory, ligands modify the difference in energy between the d orbitals (Δ) called the ligand-field splitting parameter for ligands or the crystal-field splitting parameter, which is mainly reflected in differences in color of ...

Gli elementi del gruppo 11 sono: rame (Cu), argento (Ag), oro (Au) e roentgenio (Rg). Il gruppo 11 fa parte del blocco d della tavola periodica e i suoi componenti sono metalli di transizione. Il roentgenio è un elemento artificiale radioattivo; ne sono stati prodotti solo pochi atomi e le sue proprietà chimiche sono poco note. Nella nomenclatura precedente questo gruppo era denominato IB.

I metalli alcalino terrosi sono berillio (Be), magnesio (Mg), calcio (Ca), stronzio (Sr), bario (Ba) e radio (Ra). Questi elementi chimici costituiscono il gruppo 2 del blocco s della tavola periodica. Nella nomenclatura precedente questo gruppo era denominato IIA. Sono tutti metalli piuttosto reattivi, che perdono facilmente i

due elettroni nel livello elettronico esterno formando cationi M 2+.
