A load cell is a transducer that is used to create an electrical signal whose magnitude is directly proportional to the force being measured. The various load cell types include hydraulic, pneumatic, and strain gauge.

In electronics, impedance matching is the practice of designing the input impedance of an electrical load or the output impedance of its corresponding signal source to maximize the power transfer or minimize signal reflection from the load.. In the case of a complex source impedance  $Z_S$  and load impedance  $Z_L$ , maximum power transfer is obtained when  $Z_L = Z_S^*$  where the asterisk indicates the ...

config.middleware allows you to configure the application's middleware. This is covered in depth in the Configuring Middleware section below.. config.reload\_classes\_only\_on\_change enables or disables reloading of classes only when tracked files change. By default tracks everything on autoload paths and is set to true. If config.cache\_classes is true, this option is ignored.
