In programming, algorithms perform specific functions to complete required tasks. Introduction to Algorithms, part of the Foundations of Programming course, will provide you with the fundamentals of using algorithms in programming. Simon also demonstrates the choices developers have of using different algorithms to accomplish the same tasks.

Face alignment with OpenCV and Python. The purpose of this blog post is to demonstrate how to align a face using OpenCV, Python, and facial landmarks.. Given a set of facial landmarks (the input coordinates) our goal is to warp and transform the image to an output coordinate space.. In this output coordinate space, all faces across an entire dataset should:

In computer science, A\* (pronounced "A star") is a computer algorithm that is widely used in pathfinding and graph traversal, which is the process of finding a path between multiple points, called "nodes".It enjoys widespread use due to its performance and accuracy. However, in practical travel-routing systems, it is generally outperformed by algorithms which can pre-process the graph to ...

Recursion in computer science is a method of solving a problem where the solution depends on solutions to smaller instances of the same problem (as opposed to iteration). The approach can be applied to many types of problems, and recursion is one of the central ideas of computer science.. The power of recursion evidently lies in the possibility of defining an infinite set of objects by a ...
