

tropical forest insect pests pdf

Several biomes may appear similar-to, or merge via ecotones with, tropical rainforest: . Moist seasonal tropical forest

Tropical rainforest - Wikipedia

Animals are called pests when they cause damage to agriculture by feeding on crops or parasitising livestock, such as codling moth on apples, or boll weevil on cotton. An animal could also be a pest when it causes damage to a wild ecosystem or carries germs within human habitats. Examples of these include those organisms which vector human disease, such as rats and fleas which carry the plague ...

1. Introduction. Timber for construction is one of the many forest products used around the world. It is used in buildings both large and small; here we consider timber for the construction of buildings of six or more storeys, and the biochemistry and chemistry of wood modification that could enable much larger buildings.
