Some meteorological processes are too small-scale or too complex to be explicitly included in numerical weather prediction models. Parameterization is a procedure for representing these processes by relating them to variables on the scales that the model resolves. For example, the gridboxes in weather and climate

models have sides that are between 5 kilometers (3 mi) and 300 kilometers (200 mi ...

1. Introduction. In pastoral communities of Ethiopia, climate-induced shocks and stressors such as drought, rising temperature and irregular rainfall reduce pasture and water availability leads to animal loss through hunger and disease (Conway, 2000). The weather-related natural disasters frequently occur in pastoral areas of Ethiopia, which has been exacerbated by the depletion of the natural ...
